

Triangle Sum Theorem: The sum of the measures of the angles of a triangle is _____.

Remember: An **ISOSCELES TRIANGLE** is a 3-sided polygon with at least 2 congruent sides.

Label the vertex angle, the base angles, the legs and the base of the isosceles triangle.

If two sides of a triangle are congruent, then the angles opposite those sides are congruent:

In $\triangle ABC$: if _____ \cong _____, then _____ \cong _____.

If two angles of a triangle are congruent, then the sides opposite those angles are congruent:

In $\triangle ABC$: if _____ \cong _____, then _____ \cong _____.

Remember: An **EQUILATERAL TRIANGLE** is a 3-sided polygon with all 3 congruent sides.

If a triangle is equilateral, then it is _____.

If a triangle is equiangular, then it is _____.

Each angle of an equilateral triangle measures _____.

1. Find the value of x :

2. Find the value of x :

3. Find the value of x and y :

Exterior Angle Theorem: The measure of an exterior angle of a triangle is equal to the sum of the measures of the two remote interior angles.

$$m\angle A = m\angle C + m\angle B$$

$\angle A$ & $\angle B$ are supplementary

1. Find the measure of x :

2. Find the measure of x :

3. Find the value of x :

4. Find the value of x :

5. Find the value of x :

6. Find the $m\angle ACD$:

Find the value of x:

Find the values of x and y:

Find the values of x and y:

Find the values of x and y:

Find the values of x and y:

5) Equilateral Triangle

Find the values of x and y:

6) Equilateral Triangle

Find x, y and z:

Find x, y and z:

Find x, y and z:

Exterior Angle Theorem

Solve for the given variable.

1)

$r = \underline{\hspace{2cm}}$

5)

$s = \underline{\hspace{2cm}}$

2)

$a = \underline{\hspace{2cm}}$

6)

$f = \underline{\hspace{2cm}}$

3)

$x = \underline{\hspace{2cm}}$

7)

$k = \underline{\hspace{2cm}}$

4)

$v = \underline{\hspace{2cm}}$

8)

$n = \underline{\hspace{2cm}}$

pg. 4

- ❖ The mid-segment of a triangle is the segment joining the midpoints of 2 sides of the triangle.
- ❖ The mid-segment is parallel to the third side and it is half the length of the third side.

DE is the mid-segment of $\triangle ABC$

D is the midpoint of AC and E is the midpoint of BC

DE is parallel to AB and $DE = \frac{1}{2} AB$ or $AB = 2DE$

➤ Use the mid – segment formula above to solve the following examples:

1. Solve for x :

2. Solve for x :

3. Solve for x :

$$\begin{aligned} AE &= 6x + 8 \\ BD &= 4x + 2 \end{aligned}$$

4. Solve for x :

$$\begin{aligned} AB &= BD \\ AC &= CE \\ BC &= 4x - 5 \\ DE &= -x + 17 \end{aligned}$$

Find the length of DE.
Find the length of BC.

➤ Similar: figures that have the same SHAPE but not necessarily the same size.

- Similar Polygons have:
- corresponding angles that are **congruent**
 - corresponding sides that are **proportional**

➤ Similarity Statement...

- Name the Corresponding Angles... (CONGRUENT)
- Name the Corresponding Sides... (PROPORTIONAL)

➤ Remember: A dilation is a transformation in which the pre-image and the image are the same SHAPE but not the same size. In other words, a dilation produces SIMILAR figures. The scale factor of a dilation is the **ratio of the lengths of the corresponding sides of 2 similar polygons**.

Given: $\triangle ABC \sim \triangle XYZ$

✓ Name the congruent angles:

✓ Name the proportional sides:

✓ What is the scale factor?

➤ ARE WE SIMILAR??

✓ Corresponding angles congruent?

✓ Corresponding sides proportional?

✓ If so... What is the scale factor?

✓ Write a similarity statement.

➤ ARE WE SIMILAR??

- ✓ Corresponding angles congruent?
- ✓ Corresponding sides proportional?
- ✓ If so... What is the scale factor?
- ✓ Write a similarity statement.

Figure A

Figure B

➤ When polygons are similar, the scale factor can be used to find the values of variables.

- Determine the scale factor. Then set up a proportion and solve for the unknown variable.

4)

5)

Find the missing side lengths in each pair of similar figures.

1. $\triangle ABC \sim \triangle XYZ$

2. $\triangle ABC \sim \triangle XYZ$

3. $\triangle ABC \sim \triangle XYZ$

4. $\triangle ABC \sim \triangle XYZ$

5. $\triangle JKL \sim \triangle GKH$

6. $\triangle ABC \sim \triangle ADE$

Use similar triangles to find the missing information.

7. A giraffe is 18 feet tall and casts a shadow of 12 feet. Corry casts a shadow of 4 feet. How tall is Corry?
8. When a Ferris wheel casts a 20-meter shadow, a man 1.8 meters tall casts a 2.4-meter shadow. How tall is the Ferris wheel?
9. A flagpole casts a shadow 28 feet long. A person standing nearby casts a shadow eight feet long. If the person is six feet tall, how tall is the flagpole?
10. A photograph measuring four inches wide and five inches long is enlarged to make a wall mural. If the mural is 120 inches wide, how long is the mural?
11. A 9-foot ladder leans against a building six feet above the ground. At what height would a 15-foot ladder touch the building if both ladders form the same angle with the ground?
12. Chris wants to reduce a triangular pattern with sides 16, 16 and 20 centimeters. If the longest side of the new pattern is to be 15 cm, how long should the other two sides be?

Using Similar Polygons

The polygons in each pair are similar. Find the missing side length.

2)

3)

4)

5)

6)

7)

scale factor from A to B = 2 : 7

8)

scale factor from A to B = 2 : 3

9)

scale factor from A to B = 5 : 6

10)

scale factor from A to B = 1 : 7

11)

scale factor from A to B = 2 : 3

12)

scale factor from A to B = 1 : 2

scale factor from A to B = 6 : 7

scale factor from A to B = 1 : 3

Solve for x . The polygons in each pair are similar.

scale factor from A to B = 5 : 6

scale factor from A to B = 5 : 6

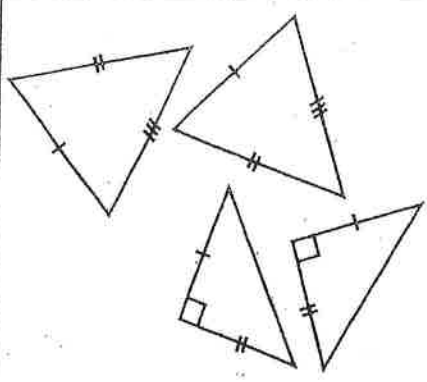

scale factor from A to B = 2 : 7

scale factor from A to B = 6 : 7

Congruent Triangles: SSS and SAS

SSS — Side, Side, Side
 three sides of one triangle are congruent to the corresponding sides of another triangle $\rightarrow \cong \triangle s$

SAS — Side, Angle, Side
 two sides and the included angle of one triangle are congruent to the corresponding parts of another triangle $\rightarrow \cong \triangle s$

State whether these pairs of triangles are congruent by SSS or SAS. If neither method works, write N.

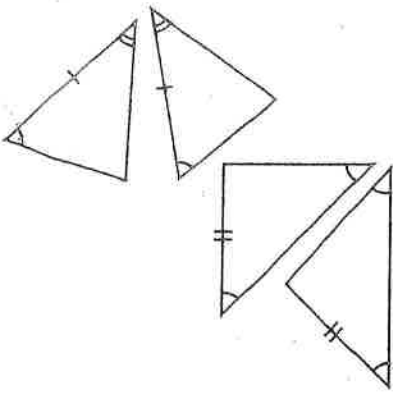

SSS and SAS Congruence

State if the two triangles are congruent. If they are, state how you know.

Congruent Triangles: ASA and AAS

ASA — Angle, Side, Angle
 two angles and the included side of one triangle are congruent to the corresponding parts of another triangle $\rightarrow \cong \Delta s$

AAS — Angle, Angle, Side
 two angles and the non-included side of one triangle are congruent to the corresponding parts of another triangle $\rightarrow \cong \Delta s$

State whether these pairs of triangles are congruent by ASA or AAS. If neither method works, write N.

Unit 4 Similar & Congruent Triangles

Lesson 4 - CLASSWORK

Name: _____

For each pair of triangles, name the congruent triangle.

1. $\triangle ABC \cong \triangle$ _____

2. $\triangle ABC \cong \triangle$ _____

3. $\triangle ABC \cong \triangle$ _____

4. $\triangle ABC \cong \triangle$ _____

5. $\triangle ABC \cong \triangle$ _____

6. $\triangle ABC \cong \triangle$ _____

7. $\triangle ABC \cong \triangle$ _____

8. $\triangle ABC \cong \triangle$ _____

Congruent Triangles Worksheet

Name _____ Period _____

I. State whether these triangles are congruent by SSS, SAS, or none.

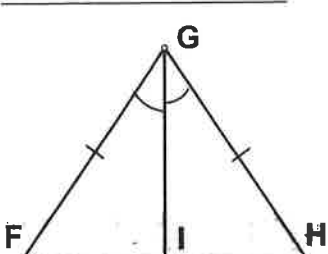

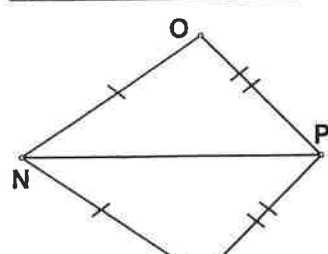

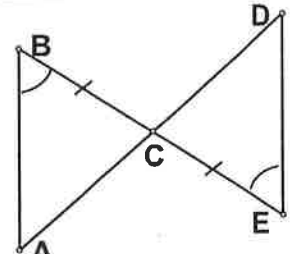

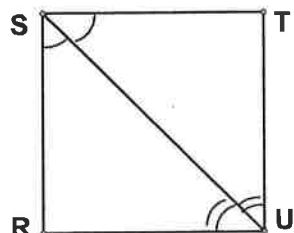

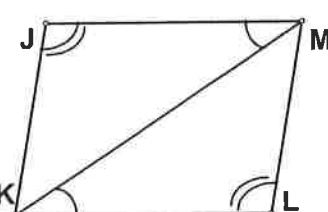

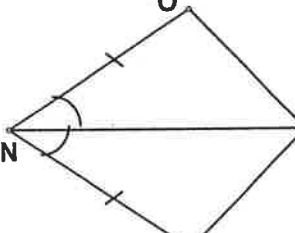

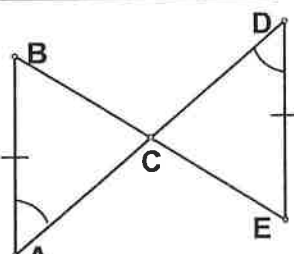

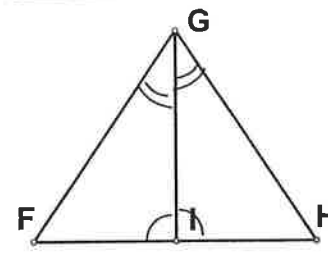

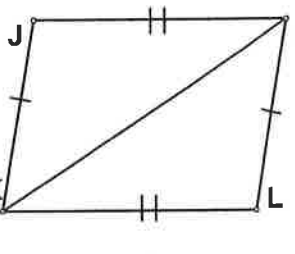

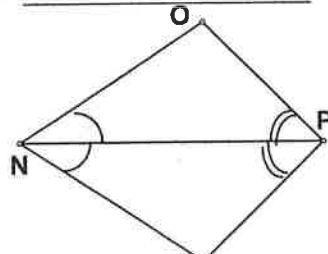

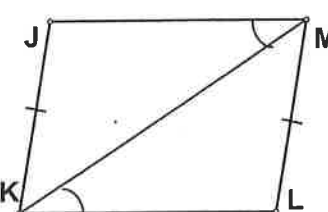

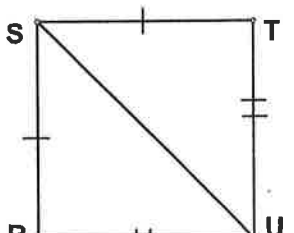

II. State whether these triangles are congruent by ASA, AAS or none.

Triangle Congruence Worksheet

For each pair of triangles, state the postulate or theorem that can be used to conclude that the triangles are congruent.

<p>1. _____</p>  <p>$\triangle FIG \cong \triangle \underline{\hspace{1cm}}$</p>	<p>2. _____</p>  <p>$\triangle NOP \cong \triangle \underline{\hspace{1cm}}$</p>	<p>3. _____</p>  <p>$\triangle ABC \cong \triangle \underline{\hspace{1cm}}$</p>
